

‘Beyond GDP’: Discussion, Synthesis and Next Steps

- Objective of the U.N. Network of Economic Statisticians: transforming and challenging the system of [economic accounts] and “experimenting” and “integrating” statistical frameworks and methods. (Results achieved!)
- Precursor to assessing economic well-being in the national accounts is an Income and Expenditure Account in Current and Constant Prices.
- The next major step is disaggregating the Income and Expenditure account by demographic group to understand disparities in economic outcomes.
- Transitioning from research to institutional support is key.
